PROJECTED LIFE EXPECTANCY

YEAR	AT BIRTH	AT AGE 65
1900	50	77
1950	68	79
2000	78	83
2050[†]	89	102

[†]DHHS high series estimates for life expectancy

Percentage of people age 65 and over with moderate or severe memory impairment, by age group and sex, 2002

Note: The definition of "moderate or severe memory impairment" is four or fewer words recalled (out of 20) on combined immediate and delayed recall tests among self-respondents. Self-respondents who refused either the immediate or delayed word recall test were excluded from the analysis. Proxy respondents with an overall memory rating of "poor" were included as having moderate or severe memory impairment. Because of some changes in methods from the 2000 edition of *Older Americans*, no inference should be made about longitudinal trends.

Reference population: These data refer to the civilian noninstitutionalized population.
